

Comms update 05/02/19

Yorkshire and Humber Care Record

The Yorkshire and Humber Care Record (exemplar for NHS England's Local Health and Care Record programme) is progressing at speed. £1m in funding has been received and a further £2m is due at the end of March 2019. We've been engaging with clinicians, information governance and technical colleagues across the region along with staff interested in Population Health Management in a series of workshops. Citizens across the region have also been engaged to understand their views on data sharing - the Joined Up Yorkshire and Humber report can be read here ([hyperlink to the STP/ICS website if they are storing](#)). Key team members are now in place with procurement underway to recruit additional resources to ensure smooth and efficient running of the programme.

Rapidly Improving Care

In Q1 2019 the pilot GP surgeries in the Humber, Coast and Vale area will go live with key and relevant patient information being shared across the Leeds Care Record. This will enable GPs directly involved in a patient's care access to information on people being treated in Leeds e.g. Leeds Teaching Hospital for cancer care. It will also allow clinical and care staff in Leeds to see key information from the primary care record within the pilot GP surgeries. Once tested the plan is to roll out the sharing of care records to further GPs and providers this year. To help inform the work every health and care provider within the region is being interviewed to understand their current provisions and capability for sharing care records. We wish to thank everyone who has participated in this endeavour.

System of Systems

In Dec 2018, we took a big step forward by testing and succeeding in sharing synthetic (pretend) patient data between Rotherham Health Record and Leeds Care Record. We are now marching forward with the following organisation becoming pilots in sharing key patient information (e.g. medications, test results) by the end of Mar 2019:

- Yorkshire Ambulance Services
- Leeds Teaching Hospitals
- Rotherham Metropolitan District Council
- Rotherham General Hospital
- Doncaster & Bassetlaw Teaching Hospital
- and Humber Teaching NHS FT

The pilot involves clinical and care staff to ensure the work is relevant to improving care of patients. It will also be overseen by information governance and cyber security colleagues to ensure patient data remains safe and only viewed appropriately by clinical and care staff providing care.

Upcoming Event

7 March 2019 – Clinical workshop for South Yorkshire and Bassetlaw clinicians. Please secure your place here <https://www.eventbrite.com/e/yorkshire-and-humber-care-record-south-yorkshire-and-bassetlaw-clinical-and-care-staff-workshop-tickets-55697923990>

Please do get in touch with the team at hnf-tr.yhcr@nhs.net with any questions.
